

Exiv2 - Bug #580

-M option fails and reports success...

21 Nov 2008 03:06 - Daniel J Blueman

Status:	Closed	Start date:

Target version:	0.18		

Description

When invoking exiv2 with multiple -M options, the first is processed, and an error is given for the second, but the return code is 0.

```
$ exiv2 mo -M 'set Exif.Image.Copyright Ascii Me' -M 'set Exif.Image.Orientation Short left, top' _MG_3095.jpg
```

```
Warning: Exif.Image.Orientation: Failed to read Short value "left, top"
```

```
$ echo $?
```

```
0
```

This has high impact, since the second EXIF tag update has been reported to succeed, but didn't.

History

#1 - 27 Nov 2008 01:36 - Andreas Huggel

The return code of the modify command is currently always 0, not only if the second command fails. But I agree this can be improved.
