Description

I wanted to recover the name of the lens with exiv2 version 0.19. Instead of the full name "EF100mm f/2.8L Macro IS USM"

I only got "(254)":

```
$ exiv2 -pa img_0337.cr2 | grep Lens
```

```
Exif.CanonCs.LensType      Short    1 (254)
Exif.CanonCs.Lens          Short    3 100.0 mm
```

Please find the extracted meta-data in "img_0337.exv".
