Description			
<p>I was about to post a bug about the Tamron lens, but noticed that another guy had already posted it there http://dev.exiv2.org/issues/712.</p> <p>The LensType 37 is "Tamron 17-50mm f/2.8 SP XR LD II Di VC" -- I'm not sure if the non-VC version has a different id, but maybe there's another field for that. At least this info is better than the numeric value.</p>

I'm updating the lens table with data from exiftool but this lens doesn't seem to be there. Can you please attach a sample image?

Calling it **Tamron SP AF 17-50mm f/2.8 XR Di II VC LD Aspherical [IF]** assuming it's [this one](#). Is it?
