

Exiv2 - Bug #944

Doubled "AF" for some Tokina lens model names on Nikon cameras

31 Dec 2013 08:25 - Torsten Bronger

Description

In nikonmn.cpp, there are things in parentheses in Tokina lens model names, for example,
AF 193 (AF 19-35mm f/3.5-4.5)

I don't really know how this is converted into a lens model in exiv2's output, but a doubled "AF" would make autodetection using lensfun difficult (loose matching would be necessary). So if possible, please remove the first "AF".

Associated revisions

Revision 3228 - 07 Jan 2014 20:28 - Niels Kristian Bech Jensen

Fix issue #944: Tokina lens name fixes. Thanks goes to Robert Rottmerhusen for explaining Tokina lens names.

Revision 3239 - 24 Jan 2014 22:51 - Niels Kristian Bech Jensen

Use the file fmountlens4t.h for updates to Robert Rottmerhusen's fmountlens list to get the fixed Tokina lens names fixed in r3228 (fix for issue #944).

Hi Torsten.

I need to investigate this issue.

Best regards,

Niels Kristian Bech Jensen

Everything outside of the parentheses (e.g. "AF 193") is the official lens name. I will remove "AF" inside the parentheses for Tokina lenses so they only include focal lengths and f-numbers.

Thanks goes to Robert Rottmerhusen for explaining Tokina lens naming to me.

Best regards,
Niels Kristian Bech Jensen
