

## Exiv2 - Bug #1014

### Duplicated header files

30 Dec 2014 21:10 - Thomas Beutlich

<b>Status:</b>	Closed	<b>Start date:</b>	30 Dec 2014
<b>Priority:</b>	Normal	<b>Due date:</b>	
<b>Assignee:</b>	Robin Mills	<b>% Done:</b>	100%
<b>Category:</b>	build	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>	0.25		
<b>Description</b>			
The header files getopt_win32.h, i18n.h, private.h, timegm.h and tzfile.h are both in src and include/exiv2. Should be only one location.			

### History

#### #1 - 31 Dec 2014 12:21 - Robin Mills

Thanks, Thomas. Well spotted. There will be more issues like this following the 0.25 integration to the trunk. Your keen eye for detail is appreciated. My focus has been to get everything to build and pass the test suite on Mac/Linux/Cygwin/MinGW and MSVC. 0.25 has introduced a new <exiv2dir>/include" tree. Some .hpp and .h files have been moved from src to include/exiv2 and it sounds like some relics have been left behind. I expect we'll find some other files in the wrong location. When/if you find further issues of this nature, please add them to this issue report as we don't need multiple issue for what are effectively multiple occurrences of this same issue.

I'll submit the fix when I get home from vacation. Happy New Year.
