

## Exiv2 - Feature #1231

### Support for Canon TimeInfo makernote section

24 Sep 2016 11:47 - Tobias E.

<b>Target version:</b>	0.26		
<b>Description</b>			
Hello,			
it would be great if you could add support for the TimeInfo section from Canon's makernotes. Maybe looking at exiftool will help as they support that already: <a href="http://search.cpan.org/dist/Image-ExifTool/lib/Image/ExifTool/TagNames.pod#Canon_TimeInfo_Tags">http://search.cpan.org/dist/Image-ExifTool/lib/Image/ExifTool/TagNames.pod#Canon_TimeInfo_Tags</a>			
Thanks in advance and keep up the good work!			

#### Associated revisions

##### #1 - 24 Sep 2016 11:59 - Robin Mills

- Target version set to 0.28

Tobias

Thanks for this suggestion. If you have test files, please add them to this issue.

Both Raphael and Sridhar have recently joined the project and both are working on the Canon MakerNotes #1219 #1203. As I am very busy getting v0.26 ready to ship, I haven't been able to mentor them as fully as I intend. So this issue is unlikely to be dealt with until v0.27. I'm not going to assign the issue at this time to either as we will have a team meeting in October to discuss assignments and schedule for v0.27.

And, if you are interested, you are welcome to join the team and help with this and other issues.

##### #2 - 24 Sep 2016 12:26 - Tobias E.

I would love to help out, but I am already quite busy hacking on darktable. :-)

You can find a raw file which contains a time zone of +2 hours (CEST) here – it's too big to be uploaded here: <https://houz.org/tmp/6Q1B7117.CR2>

#3 - 24 Sep 2016 14:12 - Robin Mills

- % Done changed from 0 to 10

- Estimated time set to 10.00

Well if you ever want to leave **the dark side**, I have plenty of fun and interesting projects to amuse you here. No *hacking* in Exiv2, only good *Software Engineering* over here.

Thanks for the file (Baker Street, I see). I've copied your files to our test files on the build server.

<http://exiv2.dyndns.org:8080/userContent/testfiles/1231/>

I've discovered that I have suitable test file. I recently wrote a script to pull down all of Phil's 7000 test files. And the CanonEOS files have this

metadata. 910 rmills@rmillsmm:~/jenkins/testfiles/Phils/Canon \$ for i in CanonEOS\*.jpg ; do echo \$i \$(exiftool \$i|grep 'Time Zone City'); done

#### #4 - 01 Dec 2016 23:58 - Ayke van Laethem

- File canon-timeinfo.patch added

I have written a patch to support the TimeInfo field. It is attached here.

It is mostly based on the information in here:

<http://www.sno.phy.queensu.ca/~phil/exiftool/TagNames/Canon.html#TimeInfo>

It works for the provided sample file, and for my own photos.

Example from the sample:

```
Exif.CanonTi.TimeZone      SLong   1 120
Exif.CanonTi.TimeZoneCity  SLong   1 Paris
Exif.CanonTi.DaylightSavings SLong   1 60
```

Example from a photo of mine:

```
Exif.CanonTi.TimeZone      SLong   1 60
Exif.CanonTi.TimeZoneCity  SLong   1 n/a
Exif.CanonTi.DaylightSavings SLong   1 0
```

Another example, now in DST (same timezone):

```
Exif.CanonTi.TimeZone      SLong   1 120
Exif.CanonTi.TimeZoneCity  SLong   1 n/a
Exif.CanonTi.DaylightSavings SLong   1 60
```

Time zone is apparently set in minutes, adding DST to it (e.g. now I'm living in UTC+1, last summer in UTC+2, which is 60 and 120 minutes respectively). I have not tested 'negative' time zones (to the west of UTC). Those should ideally be tested (I can do that if needed).

#### #5 - 02 Dec 2016 10:50 - Robin Mills

- Status changed from New to Resolved
- Assignee set to Robin Mills
- Target version changed from 0.28 to 0.26
- % Done changed from 10 to 80
- Estimated time changed from 10.00 to 3.00

Thank you, Ayke for providing the patch which I have submitted as r4690

Here's the output from current head of trunk: 509 rmills@rmillsmm:~/Jenkins/testfiles/1231 \$ exiv2 -pa --grep time/i 6Q\*tiff

```
Exif.Image.DateTime        Ascii   20 2016:04:18 11:57:18
Exif.Photo.ExposureTime    Rational 1 1/30 s
Exif.Photo.DateTimeOriginal Ascii   20 2016:04:18 11:57:18
Exif.Photo.DateTimeDigitized Ascii   20 2016:04:18 11:57:18
Exif.CanonCs.Selftimer     Short    1 Off
Exif.Photo.SubSecTime      Ascii    3 83
Exif.Photo.SubSecTimeOriginal Ascii    3 83
Exif.Photo.SubSecTimeDigitized Ascii    3 83
510 rmills@rmillsmm:~/Jenkins/testfiles/1231 $
```

And with your patch: 571 rmills@rmillsmbp:~ \$ exiv2 -pa --grep time/i 6Q\*tiff

```
Exif.Image.DateTime        Ascii   20 2016:04:18 11:57:18
Exif.Photo.ExposureTime    Rational 1 1/30 s
Exif.Photo.DateTimeOriginal Ascii   20 2016:04:18 11:57:18
Exif.Photo.DateTimeDigitized Ascii   20 2016:04:18 11:57:18
Exif.CanonCs.Selftimer     Short    1 Off
Exif.CanonTi.TimeZone      SLong   1 120
Exif.CanonTi.TimeZoneCity  SLong   1 Paris
```

```
Exif.Photo.SubSecTime      Ascii  3 83
Exif.Photo.SubSecTimeOriginal  Ascii  3 83
Exif.Photo.SubSecTimeDigitized Ascii  3 83
572 rmills@rmillsmbp:~ $
```

So you have successfully added the CanonTi group and extracted the information correctly. The existing test harness runs successfully.

Remarkably, I'm visiting Andreas (the Exiv2 Founder) this weekend and I expect we'll review your patch together. I will submit an additional regression detector to the test suite to ensure that your fix doesn't get broken by future changes in Exiv2.

#### #6 - 03 Dec 2016 14:51 - Robin Mills

Ayke

Can you provide your test file please?

The file that Tobias provided has an Exif Tag > 64k bytes and so cannot be converted to a little .exv file. Tobias' file is 30mb and I don't want to add such a large file to the test suite stored in our repository.

I hope to resource a project in 2017 #992 to have a more extensive tests which will be executed periodically by our buildserver and the associated test files will not be stored in our repository. So Tobias' test file (and many others) will be used in future. However, for the moment, it would be good to use your file as a regression detector.

Robin

#### #7 - 03 Dec 2016 18:37 - Ayke van Laethem

- File *timeinfo\_small.jpg* added
- File *timeinfo\_dst\_small.jpg* added

Nice to see it land in exiv2 :)

I have attached two files to test, one with and one without DST set (using the current time which isn't DST, so technically incorrect but the camera doesn't care). Just to be sure, I tested those again.

The provided files are resized to 1x1 (using ImageMagick convert), and have the thumbnail removed (using exiftool). That brings them to ~9KB each. I can provide the original files as well (that are simply dark photos at the lowest possible resolution to keep the file size down, ~450KB).

#### #8 - 04 Dec 2016 06:15 - Robin Mills

- Status changed from *Resolved* to *Closed*
- % Done changed from *80* to *100*

Thanks very much for the test data. I've added your files r4692 as test/data/exiv2-bug1231{a|b}.jpg

Thank You very much for working on this and providing the patch and the test files. If you're ever looking for an unpaid job on an open-source project, I would be very happy to welcome you to Team Exiv2. Thank You for your contribution.
