Description			
<p>There is "bug" on system what renames files names to timestamp of pictures took time..</p> <p>When you have SLR Digi like Nikon D100 and you take few picture in one second.. Program tries to rename those picture to same name..</p> <p>What it should do (when I bumps to situation where, there is already file on that name) is ask user if s/he would like to "override, rename, skip"..</p> <p>Then there should be also command-line parameter where you can decide what is your "default" answer to that question.</p> <p>So if there is file 20050203-140423.jpg then second (default) name (for file with same timestamp) would be 20050203-140423-1.jpg.. Third would be 20050203-140423-2.jpg...</p> <p>(Reported by jussi AT jjussi DOT com)</p>
