

Exiv2 - Bug #443

Exiv2 gives up on corrupted IOP directory

Description

I am getting the following error on a particular photo.
"Iop entry 2796 lies outside of the IFD memory buffer"

this photo actually ->

<http://img461.imageshack.us/img461/921/goofydog5iq.jpg>

Is there a way I can magically tell Exiv to just work anyway and not worry about the IFD thingo (this could be a very stupid statement as maybe the IFD is very core to the JPEG or something but I don't know much about JPEG - thats why i need the exiv library :))?

I've googled for this error and there doesn't seem to be much mention of it so perhaps it is a one off wierd one.
