ld: fatal: file M: stat failed: No such file or directory

this one is because -MM (in config/config.mk.in) is not present on Sun Studio. The equivalent there is '-xM1'

#2 - 25 Jul 2010 09:08 - Andreas Huggel

A quick workaround for the problem with -MM is to disable dependency tracking: add a --disable-dependency-tracking option to the ./configure call.

#3 - 25 Jul 2010 09:17 - Andreas Huggel

For the issue with -funsigned-char I prefer to fix the (Adobe XMP-SDK) code: change all char types to unsigned char, if that's feasible.
