I'm not sure what the issue is here. Could you explain in more detail?

I still don't understand the issue. I see the space you have added in tags.cpp. I don't know what that has to do with the po files. I don't know anything about the i18n support. If you require a Wiki Page for i18n, that's a separate matter. However I will not get involved with i18n support.

Is it sufficient for me to simply submit the patch to tags.cpp?

#### #4 - 08 Jan 2015 12:04 - Thomas Beutlich

Yes, you can apply the provided patch.

Normally, if the original English strings in the source files are altered the dependend po files need to be regenerated in order to integrate these changes. This can be done any time later (before release).

Ah, now I understand! Yes there are scripts in <exiv2dir>/website which deal with this stuff, doxygen and a whole host of release stuff. Andreas is a very good engineer and the release machinery is automated. Of course parts of the release process such as code review, inspection, bug review and release notes are time consuming human activity.

Right. I'll submit the patch and we're done for now.

Patch submitted: [r3536](#). Thank You Thomas for reporting this and providing the patch.
