

Exiv2 - Feature #572

exiv2 tool: It should be possible to insert newlines in text strings.

Target version: 0.20	
Description Some people want line breaks in their strings. While it shouldn't be a problem with the C++ API, it is apparently not possible to do this with the exiv2 command line tool.	
Additional information: http://uk.groups.yahoo.com/group/exiv2/message/1371 There was another similar request for this in JPEG comments once.

#572: Escape special characters in the JPEG comment (using the new function by Leo Sutic.

History

#1 - 10 Dec 2008 08:52 - Andreas Huggel

On Linux in a bash shell, this works:

```
ahuggel@mowgli> exiv2 -v -M 'set Exif.Image.Model Yet another fancy  
> Olympus camera' IMAGE.JPG
```

i.e., just hitting return inside a quoted string (single or double quotes) and continuing on the next line.

So the remaining questions are

- how to do it in Windows
- how to do it in a command file

#2 - 13 Jan 2010 19:06 - Andreas Huggel

- Status changed from *New* to *Resolved*

- Target version set to 0.20

- % Done changed from 0 to 100

Special characters incl. newlines and carriage returns can be escaped now.
