Target version:	0.25		

Description

Abhinav has reported by email that make testv is reporting errors.

On investigation this is due to changes in the video test files which were made to support Mahesh's GSoC13 video write work. Mahesh's code has not yet been added to the trunk.

I have submitted [r3256](#) which gets make testv to copy the video test files from [r3100](#). This 'fix' is only effective when the video test suite is copied from svn. It's necessary to use `rm -rf test/data/video` to remove the erroneous test files. make testv will correctly copy [r3100](#) to test/data/video.
